- Fast delivery of the project with out-of-hours installations
- Energy efficient solution
- Roll out programme of updating leisure centres

Air conditioning and ventilation for leisure centre management company

Air Con Environmental have worked over a number of years with Greenwich Leisure Limited (GLL) on many of their leisure centre buildings, in London and the Home Counties.

Our technical expertise and experience have allowed us to design solutions that consider the specific demands for high cooling and humidity control in different spaces. In addition to this, we have provided out-of-hours installations to reduce down-time.

Air Con Environmental were involved from the conceptual stage of the project, producing budget costs and feasibility proposals to fully advise GLL on the options available.

“I would like to thank you for the professional manner in which Air Con Environmental have recently carried out air conditioning and ventilation installations for us at our Leisure Centres and Gymsnasiums. All of the projects were delivered on time and to our satisfaction and we are looking forward to working with you on the forthcoming projects”.

Steve Hercus, Commercial Director, GLL.
